

Elementary model edits

Allowed transitions in the declared genomic exon-span edit graph

A Split

Before 

After 

Separator added; DNA retained

B Fusion

Before 

After 

Intervening DNA retained

C Boundary move

Before 

After 

One supported span edge moves

D Exonization

Before 

After 

Candidate interval; DNA retained

E Exon inactivation

Before 

After 

Annotation-conditional change

F DNA insertion

Before 

After 

Material m: absent → present

G One DNA deletion changes multiple spans in one geometry

Before

One geometry

After

Changed exon-span geometry

Endpoint contrast

does not specify
path or mechanism

Edit motifs are model transitions conditional on the declared catalogue and annotation support.
